MULTI - PROCESS WASHING MACHINE

The parts which will be washed are placed on a basket that is placed on a stainless rotary platform with sliding system are washed in a closed cabinet with high pressured hot and detergent water.

The washing process is done through water nozzles which are timed and compressive according to part structure, dirtiness rate; they clean the waste, oil, and chip on dirty surfaces in various angles.

Rinsing process follows washing process and completes the cleaning of the parts in the system. After cleaning processes drying process starts, which works with hot air and air jets.

When all processes are done all parts will be ready for the next processes like packing, coating etc. PURGE XLARGE has been designed for minimum consuming the water, detergent, electric, and time (work force) with cyclic and filtering water system.
